

Zazie Productions

Instagram account @zazieproductionsofficial

Report ID	ZP-IG-2026-0819
Version	v1.1 (supersedes chat-summary v1.0 of same date)
Prepared by	Arena.ai Agent Mode (automated public-data review)
Prepared for	The account holder ("you" throughout)
Audit date	August 19, 2026 (all data retrieved this date, U.S. Eastern)
Subject surface	instagram.com/zazieproductionsofficial — public view only
Evidence base	14 of 29 grid posts · 8 tagged-tab items · 8 public comments · profile bio & stats · 2 story-highlight titles · adjacent public web footprint
Classification	Confidential — for the account holder's use

This report analyzes only content visible to a logged-out visitor at audit time. It renders no opinion on private activity, private beliefs, motives, or mental or medical status, and makes no diagnosis. Findings are perception-risk assessments of public content, not judgments of conduct.

1 · Scope, Mandate & Interpretive Rules

You asked for an audit of your public Instagram presence identifying: main niche; recurring interests; content types; visual aesthetic; overall tone; the public archetype the account projects; what an average person, potential client, collaborator, or industry professional would assume after viewing; and an objective risk review distinguishing artistic eccentricity from genuine reputational concerns, with each item rated and assigned a disposition (keep / clarify / reduce / separate / archive / remove).

Interpretive rules applied throughout:

- **Public-only.** Only logged-out-visible content was examined. No login, no follower-list data, no DMs, no stories-of-followers, no private anything.
- **No diagnosis, no motive-inference.** Where self-descriptions exist on public pages (e.g., a public casting profile self-identifying as autistic), they are reported as self-descriptions, nothing more.
- **Perception, not conduct.** A "finding" means an average viewer could reasonably form a given impression — not that the impression is true.
- **Point-in-time.** Mirror-served metrics may lag live values; all numbers are as retrieved on 2026-08-19.
- **Artistic default.** Dark, cryptic, or transgressive styling within an avant-garde/horror-adjacent art brand is treated as intentional craft unless a visible, ordinary-viewer-visible factor pushes it into reputational territory.

2 · Methodology, Sources & Limitations

2.1 Access path

Direct retrieval of instagram.com/zazieproductionsofficial returned HTTP 403 (Instagram's login wall for anonymous crawlers). The audit therefore proceeded through public mirror/index services that re-serve logged-out-visible Instagram content, plus search engines. Key surfaces used:

- **imginn.com** — post grid, reels tab, tagged tab, story-highlights list, individual post pages (absolute timestamps, tagged accounts, comment threads).
- **pixnoy.com** — independent second mirror; supplied the verbatim bio and profile counts, used to cross-validate imginn figures.
- **Web/image search** — handle disambiguation and adjacent public footprint (Section 4.3).
- **dumpor.io, picuki, tikvib** — attempted; JS-gated or no data (retained in the source log for completeness).

2.2 Evidence classes and grading

Class	Content	Grade	Note
A — Profile surface	Bio, follower/following/post counts, highlight titles, link-in-bio presence	High	Identical across two independent mirrors
B — Own posts	14 most recent of 29 grid posts: captions, hashtags, format, likes, comments, dates	High	Verbatim captions retained (Appendix A)
C — Tagged tab	8 posts by third parties tagging the account	High	Verbatim captions retained (Appendix B)
D — Comments	8 public comments across four posts	Medium	Partial coverage; threads may have hidden/replies

Class	Content	Grade	Note
E — Adjacent public web	Search-indexed pages naming the account/handle (casting profile, curator page, press)	Medium	Off-Instagram; included only as discoverable-by-Google context
F — Visual pixels	Post imagery	Low	Mirror CDNs blocked binary fetches (Cloudflare); visual findings rest on titles, captions, covers metadata, and third-party descriptions

2.3 Limitations

- The 15 grid posts older than ≈May 14, 2026 sit behind JS pagination the mirrors do not re-serve; they could not be examined. Conclusions about the grid weight the recent, retrievable majority-by-recency window.
- Story highlight interiors are not re-served; only the two highlight titles were observable. No live stories were running at audit time.
- Follower composition (real vs. inactive vs. reciprocal) is not verifiable without platform APIs; Section 5 offers hypotheses with stated confidence rather than assertions.
- Four posts carry mirror-reported absolute timestamps (used as anchors); the remainder carry relative dates ("1/2/3 months ago"), giving ±2-week precision.

3 · Executive Summary

Verdict: The account presents as a coherent, disciplined, and genuinely embedded avant-garde composer/sound-designer brand in the psychological-horror and experimental-electronic niche. Tone is consistently professional and courteous; no hostile, conspiratorial, partisan, sexual, graphically violent, scam-adjacent, or engagement-bait content was found anywhere in the visible sample. The reputational exposure is concentrated in three areas: (1) an unexplained adjacency — visible in the public Tagged tab — to a malware-themed cybersecurity zine community, which average viewers can misread as cybercriminal-adjacent; (2) growth-pattern metrics (following 6,103 vs ≈12,000 followers, with median ≈0.4% engagement) that industry viewers commonly read as mass-follow audience inflation; and (3) the absence of any visible contact/booking path, which converts the account's credibility into no actionable next step for clients. None of these requires deletion of creative content; all three are clarifiable or curable.

3.1 Risk register at a glance

ID	Finding	Severity	Disposition	§
F-01	Glyph/cipher language as primary titling device	LOW	Keep + clarify	9.1
F-02	Tagged-tab adjacency: malware-themed security zine feature & interaction	MODERATE	Clarify or curate	9.2
F-03	Tagged-tab adjacency: "brainrot/anti-art" collab posts	LOW	Keep + curate tag visibility	9.3
F-04	Follower/following ratio & engagement gap (growth-pattern optics)	MODERATE	Reduce (non-content fix)	9.4
F-05	Credit ambiguity: practice scores vs. commissioned work; unreleased projects	LOW	Clarify captions/credits	9.5
F-06	No visible link-in-bio, contact route, or credits hub	MODERATE	Fix (add)	9.6
F-07	Third-party media repost (Freakshow Industries)	LOW	Keep + attribution line	9.7

ID	Finding	Severity	Disposition	§
F-08	Horror/psychological-dark theming	LOW	Keep (genre core)	9.8
F-09	Total anonymity — no face, no personal name	LOW	Keep, optionally soften	9.9
F-10	Cadence variance & insider jargon	LOW	Clarify (plain-language layer)	9.10
F-11	Off-platform persona/claim sprawl discoverable by search	LOW	Separate & align	9.11

No finding rated HIGH. No visible content requires removal on reputational grounds; no TOS-violating, illegal, or policy-tripping content was observed in the audited sample.

3.2 Top three remediation priorities (full roadmap §11)

P1 — Add a link-in-bio hub (portfolio, streaming, email/booking) and one plain-English positioning line; keep the glyphs as signature, not sole carrier of meaning.

P2 — Contextualize or curate the Tagged tab: either publish an own-post explaining the audio-ML/security work in plain language, or hide the malware-zine and brainrot tags from the tab so it shows only credits.

P3 — Repair the numbers picture: steadily prune the 6,103 following list toward a normal ratio, and label scoring posts "commissioned" vs. "portfolio re-score."

4 · Account Identity & Public Topology

4.1 Profile surface (Evidence Class A)

Field	Publicly visible value (verbatim where quoted)
Display name	Zazie Productions
Handle	@zazieproductionsofficial — the "official" suffix asserts canonical-brand status; no other competing account surfaced in search, so it reads as brand formality rather than impersonation defense
Bio	"Film Composer [glyph run: U+2330 U+27DF U+2367 U+23E7 · U+2353 U+2372 U+2351 U+210D U+238E] Experimental Producer / Multimedia Artist. Avant-garde, psychological, & immersive sound." (glyph run analyzed in Appendix E)
Posts / Followers / Following	29 / ≈12,000 / 6,103 (mirror-reported, cross-validated on two mirrors)
Link-in-bio	None observed on either mirror — no external link of any kind surfaced
Story highlights	"Collabs"; a second titled only with an emoji/glyph string ([pager-emoji] + shield-glyph + modified staff-glyph; Appendix E)
Face / personal name	None visible anywhere in the audited sample; fully anonymous brand persona
Account category label	Not visible via mirrors (professional-category badge, if any, unconfirmed)

4.2 What the surface alone signals

A first-time viewer sees: a named production brand, an anonymous principal, a credentialed-sounding composer identity, an unintelligible glyph run, a sizable follower count, a visibly large following count, and — critically — no link and no contact path. The bio's readable half is precise and hireable ("Film Composer... Avant-garde, psychological, & immersive sound"); its unreadable half is pure signature. The asymmetry between a 12k follower count and a missing business pathway is the profile's central structural paradox: it advertises an artist of stature while behaving like a private account.

4.3 Adjacent public footprint discoverable by search (Evidence Class E)

A client or journalist who Googles the brand name finds, in addition to unrelated entities (French singer "Zazie"; Toronto's "Zazie Films"; "Zadig Productions"), the following publicly indexed pages that name this exact brand/handle:

- **castingcall.club/zazieproductions** — a creator profile self-describing as "Award Winning Composer, Autistic Prodigy, Meme Influencer" and "clandestine autistic polymath," listing press credits (HEAVY Magazine, Ranger Magazine, Superpresent, 100Subtexts, Indie AM, Radioclick, Shock Web Radio, Pop Phantasma, Breaking Hits), an Enigma Labs UFO-sighting credit, streaming/bandcamp links, and an education section that ends with stray keyboard characters ("hfawefaw"). It also publicly links a separate satire persona account described as a "viral neurodivergent-oriented satire persona... (28k followers, 8M views)."
- **groover.co curator profile** — the brand operates a curator/reviewer profile on the Groover promo platform.
- **Press corroborated on-Instagram** — EX-06 (magazine feature gratitude post) and TG-02/TG-07 (compilation inclusions) partially corroborate the "featured/award-adjacent" claims from within the audited surface itself.

These are self-descriptions on public pages — reported, not assessed. Their relevance: the casting page's carnival-barker register ("Autistic Prodigy, Meme Influencer") sits oddly beside the restrained IG composer brand, and a stray text artifact ("hfawefaw") in its education field slightly undercuts the page's care level. This is F-11.

5 · Quantitative Analysis (Class B/D evidence)

5.1 Grid-post engagement inventory

Likes/comments as mirror-reported at audit time. ER = likes ÷ 12,000 followers. "Anchor" dates are mirror-reported absolute timestamps; others derive from relative dates (±2 weeks).

Exhibit	Shortcode	Date (2026)	Format	Likes	Comments	ER
EX-01	Da8t82hhB9u	~mid-Jul (rel.)	Reel ~13s — modular collab w/ @ohh_its_a_box	58	1	0.48%
EX-02	Davsm9qBbm q	Jul 13 (anchor)	Reel 30s — glyph-titled visual	57	1	0.48%
EX-03	DZqoz6RxBdc	Jun 17 (anchor)	Photo — no caption	65	3	0.54%
EX-04	DYU2Qi9RtLE	May 14 (anchor)	Photo — Freakshow Industries VST post	1,733	2	14.4%
EX-05	DZ6ZLI1x_T0	~mid-Jun (rel.)	Carousel — discography highlights	37	0	0.31%
EX-06	DZfFHkREWn W	~mid-Jun (rel.)	Photo — magazine-feature gratitude	63	4	0.53%
EX-07	DZfHxTjxhb_	~late May (rel.)	Reel 48s — Home Intruder score demo	29	4	0.24%
EX-08	DYYsW1qNjT7	~mid-May (rel.)	Reel 35s — unreleased experimental cut	33	4	0.28%
EX-09	DaOSHDIB4Q3	~Jun (rel.)	Reel 6s — captionless mood piece	23	0	0.19%
EX-10	DYxHJ-RxLY3	~mid-May (rel.)	Reel 26s — audiovisual study (album)	41	3	0.34%
EX-11	DYzSkpHxPLo	May 26 (anchor)	Reel 105s — Goodbye Brother score	93	2	0.78%
EX-12	DYYMqH6xW2j	~mid-May (rel.)	Reel 32s — experimental short excerpt	35	2	0.29%
EX-13	DYsJg49RRvF	~mid-May (rel.)	Reel — audiovisual experiment pt. 2	83	5	0.69%

Exhibit	Shortcode	Date (2026)	Format	Likes	Cmnts	ER
EX-14	(reels tab)	~May (rel.)	Reel — audiovisual experiment pt. 1	n/a	n/a	—

5.2 Computed statistics

Metric	Value	Reading
Median likes (excl. EX-04 outlier)	49 (n=13)	Steady niche core audience
Mean likes (excl. outlier)	≈52	Consistent with median — no bimodality
Engagement-rate range	0.19% – 0.78% (median 0.41%)	Below the 1–5% range commonly cited for 10k–100k accounts
Outlier EX-04	1,733 likes (≈35× median), only 2 comments	Signature of off-follower distribution (Explore/hashtag reach): many passive viewers, few commenters
Followers ÷ following	12,000 ÷ 6,103 ≈ 1.97 : 1	Following equals ~51% of followers — the classic footprint of reciprocal (follow-back) audience building
Visible-window cadence	14 posts ≈ May 14 – mid-Jul ≈ 1 post / 4.6 days	Healthy, regular recent cadence; pre-May history sparse/unknown (15 posts across ≥1 prior year)
Third-party reach events	TG-08 (69k likes on a post using his track), TG-06 (≈4k likes zine feature), EX-04 (1.7k)	The brand's media travels farther in others' feeds than in its own

5.3 Interpretation — three hypotheses, ranked

H1 (moderate-to-high confidence): passive reciprocal audience. The ≈2:1 follower ratio plus uniformly sub-1% engagement is the typical signature of follow-back growth: followers acquired via mass-following who don't consume the content. This is a perception problem for industry viewers (F-04), not misconduct.

H2 (low-to-moderate): niche-distribution suppression. Hermetic avant-garde hashtags and no shareable hooks can depress reach even among genuine followers. Partially supported: EX-04, the single broadly-relatable post (gear commentary), is the single outlier.

H3 (low): mirror undercount. Mirror metrics can lag or drop likes; two mirrors agreeing on magnitude weakens this.

5.4 Engagement quality (Class D)

Comment volume is thin but **human and positive**: a recurring civilian fan (user "laceytorge" comments on three separate posts, including "Score is great. Visuals, creepy af"), a casual admirer ("Cooooooooo!!"), applause emojis, and — notably — an emoji comment from the **@church.of.malware account itself** on EX-11, confirming that the infosec-zine community (F-02) is an active engagement node, not a one-off tag. No spam, bot-plaque patterns, self-comment threads, or negativity were observed in retrievable threads. Full transcripts: Appendix C.

6 · Content Inventory & Taxonomy (Class B)

6.1 Category distribution of the visible grid

Content pillar	Share	Exhibits	Function
Audiovisual synthesis / creative coding	4/14	EX-02, EX-10, EX-13, EX-14	Signature art-tech; shows process, not just product
Film/short scoring demos	3/14	EX-07, EX-11, EX-12	Hire-me proof: score + picture, named influences (Colin Stetson, Krzysztof Penderecki)
Press & milestone gratitude	3/14	EX-05, EX-06 (+EX-04 gear culture)	Third-party validation; warm, non-braggy tone
Modular-synth collaboration	1/14	EX-01	Community proof; improvised-with-peers signal
Gear/plugin culture commentary	1/14	EX-04	Broadest-appeal post; the engagement outlier
Mood pieces (captionless)	2/14	EX-03, EX-09	Pure-aesthetic texture posts

6.2 Hashtag forensics (visible captions)

Niche-consistent, professional tag hygiene. Most frequent: #audiovisual (4), #experimentalmusic (3), #idm (3), #psychedelic (3), #creativetechnologist (3), #experimental film (2), #filmcomposer (2), #psychologicalhorror (2). No spam/banned-pattern tags; engagement-bait tags appear exactly once (#fyp, EX-11). One caption contains a Turkish dotless-i inside a hashtag (#electronicmusi[ı = U+0131]c, EX-06) — a typographic slip that breaks the hashtag's searchability; trivial but worth knowing.

6.3 Format mix

Reels ≈10–11 of 14 visible posts (dominant), photos 3, carousel 1. Reels durations range 6s–105s. The account behaves as a process-and-craft studio journal rendered in short video — appropriate to the niche — with two textless mood posts as pure aesthetic seasoning.

7 · Thematic Findings

7.1 Main niche

Experimental music composition and sound design for psychological-horror and immersive media, expressed through an avant-garde electronic practice (IDM, modular synthesis, audiovisual art). Bio and all 14 visible posts triangulate the same positioning; there is no off-niche drift anywhere in the sample.

7.2 Recurring interests (evidence-linked)

- **Scoring as craft** — EX-07, EX-11, EX-12; explicit composer lineage citation (Stetson, Penderecki).
- **Audiovisual synthesis / creative coding** — EX-02, EX-10, EX-13, EX-14; ESP32/DSP tooling named.
- **Modular synthesis** — EX-01 (Eurorack improv with @ohh_its_a_box).
- **Psychedelic/glitch experimental film** — EX-08, EX-12 (#glitchartistscollective, #trippy, #avantgarde).
- **Gear & plugin culture** — EX-04 (Freakshow Industries).
- **Underground community participation** — TG-01/03 (SWINEWOMB NYC horror-theater), TG-02 & TG-07 (compilations), TG-08 (69k-like viral use of his track "Timeless Retro Splurge").

- **Glyph/cipher visual language** — bio glyph run, EX-02 title, EX-05 sign-off, glyph highlight title (Appendix E).

7.3 Visual aesthetic

Dark, arcane, signal-corrupted minimalism: horror/thriller footage, abstract spectral and glitch visuals described as live-reactive to sound, cryptic Unicode/APL-block titling, data-bureaucratic track naming ("O— / 97.8°F / UPS Tracking #1Z84A91"), album-art collage. Zero lifestyle, selfie, or behind-the-scenes-human content. The feed reads as one continuous art object — a curated "transmission" rather than a social feed. (Pixel-level examination was not possible from the audit environment — Evidence Grade F — so aesthetic findings rest on titling, captions, format, and third-party descriptions.)

7.4 Overall tone

Uniformly **earnest, understated, craft-first, courteous**. Gratitude posts are specific and warm ("Always grateful when publications take the time to engage deeply with strange work and meet it on its own terms"). No complaints, no drama, no politics, no feuds, no sarcasm at anyone's expense. The only negativity located anywhere in the audited surface is outsider confusion (CM-01: "I don't understand what I'm looking at exactly") — which is a comprehension finding, not a hostility finding.

7.5 Public archetype projected

The anonymous avant-garde polymath — a "ghost composer" cipher-artist: technically deep, aesthetically hermetic, embedded in real underground networks (horror theater, audiozines, glitch-art collectives, and — less helpfully — an infosec-zine scene). Projects competence and mystery in equal measure; the mystery is clearly deliberate and mostly an asset (7.5), until it collides with commercial intent (9.6).

8 · Perception Modeling by Audience Segment

Segment	Likely assumptions after viewing	Primary friction	Evidence
Average person	A skilled but cryptic experimental musician who makes eerie music for horror films; clearly serious about craft; the symbols are artsy, not sinister; no idea how to follow, hire, or support them	Glyph language; abstract reels with no plain-language frame (CM-01)	EX-02, EX-04+CM-01, bio
Potential client (filmmaker / game dev / podcast-ARG producer)	Impressive scoring reels with literate references; third-party validation exists; but is this person hireable? Which credits are real jobs? The tagged page has a malware-zine thing — what is that?	No link/contact; credit ambiguity (F-05); unexplained infosec adjacency (F-02)	EX-07, EX-11, EX-06, TG-06, no link-in-bio
Collaborator (synth / glitch / horror-theater scene)	Very approachable: improvises with peers, thanks press, appears on compilations, keeps a "Collabs" highlight; the cryptic aesthetic is genre-native and attractive	Minimal — this segment is well served	EX-01, EX-05, EX-06, TG-01...TG-05, TG-07, TG-08
Industry professional (label / supervisor / agency)	Credible niche craft, small-but-real underground footprint; but 12k followers vs double-digit likes and a 6.1k following list reads as growth-tactic inflation; anonymous principal; no business pathway	Ratio + ER pattern (F-04); no contact/credits hub (F-06)	\$5 statistics; \$4.1 surface

9 · Risk Register — Detailed Findings

Severity scale: **LOW** = stylistic, no meaningful trust cost · **MODERATE** = plausibly costs opportunities/trust with a material share of viewers · **HIGH** = likely to be disqualifying for average viewers or professionals (none found). Each finding states whether it is artistic eccentricity (protected) or a genuine reputational concern (actionable).

F-01 · Glyph/cipher language as the primary titling device

Severity	Character	Evidence confidence	Disposition
LOW	Artistic eccentricity (core brand)	High	KEEP — and CLARIFY: pair each glyph title with a one-line plain-English descriptor; retain glyphs as signature.

Evidence: Bio glyph run (██████ ██████); EX-02 title "█ERR://LOOKED_BACK"; EX-05 sign-off "██×██^"; highlight titled only with emoji/glyphs; codepoint analysis Appendix E.

Analysis: Consistent, deliberate conlang-adjacent styling native to analog-horror/ARG aesthetics. It builds mystique for the target scene while alienating casual viewers — one of only two commenters on the account's most-seen post asked what they were even looking at. Risk is comprehension, not reputation: nothing in the glyphs encodes hostility, ideology, or claims.

F-02 · Tagged-tab adjacency: malware-themed cybersecurity zine

Severity	Character	Evidence confidence	Disposition
MODERATE	Reputational concern (context gap), likely legitimate activity	High	CLARIFY (preferred): publish one plain-language own-post explaining the audio-ML/security work (what it is, for whom, legit framing) so the tag lands as a credential; or CURATE/REDUCE: hide the tag from your Tagged tab via manual tag approval. Do not leave it unexplained next to a hire-me brand.

Evidence: TG-06: third-party post (≈4k likes) from a "Community Codex" infosec zine featuring "Zazie Productions @zazieproductionsofficial — adversarial audio/ML" alongside items titled "malware deep dives," "credential harvesting research," "hack-house screen sharing for hackers," and "WinDoS PoC," with a "Malware bless" sign-off, a churchofmalware.org link and Discord invite. CM-07: the same @church.of.malware account comments ♥♥♥ on EX-11 — an active relationship.

Analysis: The single most misreadable surface on the profile. An average viewer who taps the Tagged tab sees your composer brand displayed inside a malware-themed community, directly beneath the words "credential harvesting." Most will not know that "adversarial ML," proof-of-concept malware research, and security zines are a legitimate (if edgy-aesthetic) research subculture — they will pattern-match to cybercrime. For a sound designer pitching mainstream film/game clients, this is an avoidable trust leak. It is a context problem, not a conduct problem: nothing visible shows wrongdoing by you.

F-03 · Tagged-tab adjacency: "brainrot / anti-art" collab posts

Severity	Character	Evidence confidence	Disposition
LOW	Artistic eccentricity (adjacent community)	High	KEEP — with tag-visibility curation if professional leads matter more than scene signal on any given quarter.

Evidence: TG-04, TG-05: repeated tags from a Miami punk/anti-art video artist captioned "w @zazieproductionsofficial" with tags #brainrot #brainrotcore #scitzoposting #shitposting #horrorart #punkart and gushing emoji runs.

Analysis: Reads as chaotic underground shitpost-art camaraderie. The #scitzoposting-style tags (misspelled slang referencing schizophrenia) are scene in-jokes, not your statements — but on a tag tab beside an anonymous composer brand, they lower the professional floor slightly. Cost is small; the collab energy itself is an asset.

F-04 · Growth-pattern metrics (ratio + engagement gap)

Severity	Character	Evidence confidence	Disposition
MODERATE	Reputational concern (perception of audience inflation)	Medium-High	REDUCE (non-content): prune the following list steadily toward a normal ratio (no mass-unfollow single event needed); shift to community engagement with the synth/film-scoring scene; never purchase engagement.

Evidence: §5: following 6,103 vs ≈12,000 followers; median ER 0.41% with 0.19–0.78% band; one 35× outlier driven by off-follower distribution; industry-standard heuristics place comparable accounts nearer 1–5%.

Analysis: The ratio is the footprint of reciprocal follow-growth. It does not accuse you of buying followers — mass-following is the likelier mechanic — but industry viewers discount audiences built this way, and it partially explains why a 12k-follower account posts double-digit likes. This is the finding most likely to quietly cost supervisory/label interest, and it is fully curable.

F-05 · Credit ambiguity — practice vs. commissioned; unreleased projects

Severity	Character	Evidence confidence	Disposition
LOW	Reputational concern (verifiability), honest wording	High	CLARIFY: standard suffix convention — "portfolio re-score (film provided by Cue Tube)" vs. "commissioned score"; name the director/production on unreleased work when permissible, or say "NDA project, audio demo only."

Evidence: EX-11: "Fully original score for... 'Goodbye Brother' from Cue Tube's short film library" — Cue Tube supplies films for scoring practice; phrasing can be misread as a commissioned film credit. EX-07: score for the "unreleased" thriller Home Intruder — unverifiable by definition. EX-12: "The full is on my YouTube channel" (fragmentary sentence).

Analysis: Nothing here is false — the wording is honest — but each asks the viewer to do verification work the account could do for them. Early-career composers live on practice credits; labeling them as such converts a soft spot into a credibility signal ("transparent about what's what").

F-06 · No visible link-in-bio, contact route, or credits hub

Severity	Character	Evidence confidence	Disposition
MODERATE	Reputational concern (professionalism gap / opportunity cost)	High	FIX (add): link hub (portfolio, streaming, email/booking form); one plain-English positioning line in bio; consider the professional account-category badge.

Evidence: §4.1: no external link surfaced on either mirror; bio offers no CTA; no email, booking, or portfolio destination visible.

Analysis: For an account whose captions and adjacent profiles indicate active interest in film/game/ARG work, this is the single cheapest, highest-yield fix in the report. It also feeds the F-04 perception: an inflated-looking audience with no business front reads as hobbyist.

F-07 · Third-party media repost (Freakshow Industries)

Severity	Character	Evidence confidence	Disposition
LOW	Artistic eccentricity / minor rights hygiene	High	KEEP — optionally add "video via @freakshow_industries" attribution if the footage is theirs.

Evidence: EX-04: "Wildest VST plug-ins on the market from Freakshow Industries," tagged @freakshow_industries — the account's top post (1,733 likes), re-serving the plugin maker's deliberately transgressive marketing material.

Analysis: Tagging the source brand materially mitigates any rights question; the post is standard gear-enthusiast sharing and drove the account's biggest reach. Freakshow's brand tone is intentionally abrasive, so this is also the account's most 'mainstream-edgy' surface — still comfortably within music-tech culture norms.

F-08 · Horror / psychological-dark theming

Severity	Character	Evidence confidence	Disposition
LOW	Artistic eccentricity (genre core)	High	KEEP. Guidance only: continue avoiding real-violence imagery; if your SWINEWOMB role is a credit (sound/music), claim it explicitly on your own grid.

Evidence: EX-07 (car-chase dread), EX-11 (+ CM-08: "Score is great. Visuals, creepy af"), TG-01/TG-03 (Southern-Gothic body-horror theater SWINEWOMB — written/directed by a third party; nature of your involvement not stated on-face), pervasive #psychologicalhorror tagging.

Analysis: Dark genre theming is the account's commercial niche, executed with named art-music lineage (Stetson, Penderecki) that frames it as craft. No real-gore, real-distress, or shock-for-shock content was observed. For general audiences this is 'eerie but obviously artistic.'

F-09 · Total anonymity — no face, no personal name

Severity	Character	Evidence confidence	Disposition
LOW	Artistic eccentricity (deliberate mystique)	High	KEEP — optionally soften with an 'About the artist' illustrated card (hands-at-modular, studio silhouette, written voice) to humanize without doxxing yourself.

Evidence: No selfie, name, location, or human image anywhere in Classes A-D; brand-only identity; adjacent casting profile also foregrounds anonymity ("clandestine").

Analysis: Anonymity is coherent with the cipher-artist brand and common in electronic/experimental scenes (cf. various masked acts). Its cost surfaces only at the hiring moment: clients buy a person's reliability. A middle path exists that preserves mystique.

F-10 · Cadence variance and insider jargon

Severity	Character	Evidence confidence	Disposition
LOW	Mixed (structural + artistic)	High	CLARIFY: one plain-language sentence per post ('what you're hearing/seeing, and why a filmmaker should care'); set a sustainable minimum cadence (e.g., 1 post + 2 story-engagements weekly).

Evidence: Recent window ≈1 post/4.6 days, but pre-May history sparse (15 posts over a year-plus); deep-technical caption register (#dsp #esp32, "realtime spectral ecosystem," Eurorack idiom) with no lay translation layer.

Analysis: Niche jargon is identity — the ideal audience speaks it. The gap is the absence of any second register for the curious middle audience (filmmakers who need scores but don't know what an ESP32 is). Cadence gaps compound the low-engagement read.

F-11 · Off-platform persona & claim sprawl discoverable via search

Severity	Character	Evidence confidence	Disposition
LOW	Reputational concern (brand consistency), self-described	Medium	SEPARATE (maintain) + ALIGN: keep accounts separate; align the public self-descriptions across pages; fix the stray text; ensure award/press claims link their sources.

Evidence: Class E: public casting profile self-describing as "Award Winning Composer, Autistic Prodigy, Meme Influencer" / "clandestine autistic polymath," linking a separate 28k-follower satire persona; stray text artifact "hfawefaw" in its education field; name collisions with unrelated entities (singer Zazie; Zazie Films).

Analysis: None of this appears on Instagram — the separation between the composer account and the satire persona is already correct practice. The exposure is that any client who Googles the brand meets a carnival-barker register and a typo'd credential page adjacent to your restrained IG presence. (All self-descriptions; no diagnosis is rendered or implied.)

10 · Clean-Category Verification

Each category from the audit mandate was explicitly searched across all visible surfaces (bio, 14 grid posts, 8 tagged posts, retrievable comments, highlight titles). Results:

Category	Result	Coverage note
Excessively negative / hostile tone	NOT FOUND	Zero negative captions or hostile comments; tone uniformly courteous
Instability signaling	NOT FOUND	No visible crisis, erratic-affect, or erratic-cadence content; posting is regular in the visible window
Conspiratorial content	NOT FOUND	No conspiracy claims, no ideologically-loaded glyphs (Appendix E shows APL/mathematical blocks, not symbol-systems with ideological use)
Alt-right / partisan signals	NOT FOUND	No political content of any direction; adjacent accounts are art/scene accounts
Cybercriminal signaling	NOT FOUND on owned content; ADJACENT via TG-06	See F-02: third-party malware-zine feature in the Tagged tab is the one surface open to this misreading
Sexually explicit content	NOT FOUND	None in any visible post or comment
Graphic violence	NOT FOUND	Horror is atmospheric/scored dread; no gore imagery described or referenced on owned posts
Scam-adjacent / misleading offers	NOT FOUND	Nothing sold, promised, or claimed without basis on the IG surface; off-IG claims partially corroborated by on-IG press (\$4.3)
Aggressive marketing	NOT FOUND	No funnels, hard CTAs, DM-solicitation patterns, or engagement bait (single #fyp across 14 posts)
Excessive personal disclosure	NOT FOUND	The inverse: near-zero personal disclosure (see F-09)
Public conflict / feuding	NOT FOUND	No callouts, subtextual feuds, or argumentative threads
Copyright concerns	MINOR, one item	EX-04 third-party marketing media, source-tagged (F-07); EX-11 uses film footage within a scoring-practice framework that supplies footage for that purpose

11 • Remediation Roadmap

Priority	Window	Actions	Findings addressed
P1 — Convert credibility into contact	This week	Add link hub (portfolio, streaming, email/booking); add one plain-English bio line beneath the glyph line; turn on manual tag review	F-06, F-02 (interim), F-03 (interim)
P2 — Close the context gaps	Next 30 days	Own-post explaining the audio-ML/security work in lay terms; adopt the 'portfolio re-score vs. commissioned' caption convention; add plain-language first lines to technical posts; optionally an About-the-Artist card; claim or clarify the SWINEWOMB credit	F-02, F-05, F-08, F-09, F-10
P3 — Repair the numbers & the search results	Next 90 days	Steady following-list prune toward a normal ratio; community engagement cadence (comments on synth/film-scoring accounts); align off-platform bios (casting page), fix stray text, link award/press sources; keep satire persona fully separated	F-04, F-11, F-10

What NOT to change: the niche focus, the glyph signature, the anonymity, the horror theming, the gratitude register, and the collab visibility — these are the account's equity. Every recommended action adds a legibility layer around the art, or removes ambiguity, without touching the art itself.

12 • Final Summary

Primary niche	Avant-garde/experimental film composition & sound design for psychological-horror and immersive media (IDM, modular synthesis, audiovisual art)
Strongest aesthetic traits	Dark arcane minimalism: APL-block glyph typography, glitch/spectral audio-reactive visuals, horror atmospherics, data-bureaucratic titling, total anonymity
Most apparent archetype	The anonymous avant-garde polymath — a cipher-artist 'ghost composer' embedded in real underground experimental-music and horror-theater networks
Ideal audience	Indie horror filmmakers; game/ARG/narrative-experience developers; analog-horror creators; modular-synth & IDM communities; experimental labels, zines, and new-media art scenes
Greatest strength	Authenticity with verifiable third-party proof: consistent niche identity backed by real press, compilations, theater adjacency, peer collabs, and a 69k-like viral use of an original track
Biggest source of confusion	Glyph-only meaning plus unlabeled credit context — viewers can't decode the cipher or distinguish commissioned work from practice; a real commenter said exactly this (CM-01)
Most significant red flag for an average viewer	The Tagged tab placing the brand inside a malware-themed cybersecurity zine ('adversarial audio/ML' beside 'credential harvesting research' and 'Malware bless') — easily misread as cybercriminal-adjacent. Secondary: the 12k-followers / 6.1k-following / double-digit-likes pattern professionals read as audience inflation
Three highest-priority changes	1) Add link hub + plain-English positioning (keep glyphs as signature). 2) Contextualize or curate the Tagged-tab infosec adjacency — explain it on your grid or hide the tags. 3) Prune the following list and label scores 'commissioned' vs. 'portfolio re-score' so clients and industry viewers can verify and trust what they see

Appendix A · Grid-Post Exhibit Register (verbatim captions)

Captions quoted verbatim from mirror re-service; hashtags preserved; glyph codepoints in Appendix E. Dates: anchors are mirror-reported absolute; (rel.) = relative ±2 weeks.

EX-07 · DZfHxTjxhb_ · ~late May 2026 (rel.) · 29[heart-emoji] / 4[comments]

Composed the score and did sound design for this car chase scene from the unreleased atmospheric psychological thriller Home Intruder.

Inspired by the visceral physicality of Colin Stetson and the psychological dread of Krzysztof Penderecki.

ID / shortcode	Engagement	Author & content (trimmed verbatim)	Signal
TG-05 · DalAul6tpTi	17[heart-emoji] / 2[comments]	Same artist: "#paradolia ... w @zazieproductionsofficial" + same tag family	Repeat collab — ongoing creative relationship
TG-06 · DZkb6KVIWF	≈4k[heart-emoji] / 66[comments]	"Community Codex" infosec zine call-for-papers launch featuring "Zazie Productions @zazieproductionsofficial — adversarial audio/ML" alongside OSINT dashboards, "Tel Aviv credential harvesting research," "hack-house screen sharing for hackers," "WinDoS PoC," "LYRE", "Malware bless" sign-off; churchofmalware.org + Discord links	Infosec-zine community treats you as a featured contributor (F-02) — largest-audience tag on your profile
TG-07 · DZTs6Ek_HW	3[heart-emoji] / 3[comments]	Gelombang Audiozine "Field Recording Vol. 4" — 11-artist international compilation incl. Zazie Productions; Bandcamp link	International experimental-community credit
TG-08 · DJDd0fWgYdN	69k[heart-emoji] / 264[comments]	Third-party post: "Comment what you assume this job is (This is an original song btw. You can find more under Zazie Productions) / Track: Timeless Retro Splurge by Zazie Productions" — era-consistent with mid-2024	Largest reach event associated with the brand; original music credited

Appendix C · Public Comment Transcripts (retrievable subset)

ID	On	User	Comment (verbatim)	Read
CM-01	EX-04	laceytorge	"I don't understand what I'm looking at exactly"	Outsider confusion — the comprehension finding in one line
CM-02	EX-04	adarsh_rap_series_1	[clap-emoji]	Neutral-positive
CM-03	EX-03	christy_b41	[clap-emoji]	Positive
CM-04	EX-03	ducktor_svnt	[fire-emoji] x3	Positive
CM-05	EX-03	laceytorge	[fire-emoji] x3	Recurring fan
CM-06	EX-02	katya_davyd0va	"Cooooooool!"	Casual admiration
CM-07	EX-11	church.of.malware	[heart-emoji] x3	Active infosec-community engagement node (F-02)
CM-08	EX-11	laceytorge	"Score is great. Visuals, creepy af"	Strongest unprompted testimonial located

Commenter "laceytorge" appears on three separate posts across three months (EX-03, EX-04, EX-11) — the most visible evidence of a genuine recurring civilian audience member. No negative, spam, or bot-pattern comments were retrievable on any post.

Appendix D · Source & Access Log (all retrieved 2026-08-19, U.S. Eastern)

ID	Surface / URL	Method	Result
SRC-01	instagram.com/zazieproductionsofficial/	Direct fetch	HTTP 403 — login wall; no data
SRC-02	imginn.com/zazieproductionsofficial/	Mirror	Grid: 14 posts w/ captions, likes, comments, relative dates

ID	Surface / URL	Method	Result
SRC-03	imginn.com/reels/zazieproductionsofficial/	Mirror	Reels tab incl. EX-14 (partial)
SRC-04	imginn.com/tagged/zazieproductionsofficial/	Mirror	8 tagged posts, verbatim captions
SRC-05	imginn.com/stories/zazieproductionsofficial/	Mirror	No live stories; 2 highlight titles
SRC-06	pixnoy.com/profile/zazieproductionsofficial/	Mirror (cross-validation)	Verbatim bio; counts 29 / 12.0k / 6,103
SRC-07	imginn.com/p/DYU2Qi9RtLE/	Mirror post page	EX-04: abs. timestamp May 14 2026 16:27; tagged user; 2 comments
SRC-08	imginn.com/p/DZqoz6RxBdc/	Mirror post page	EX-03: abs. timestamp Jun 17 2026 00:11; 3 comments
SRC-09	imginn.com/p/Davsm9qBbmQ/	Mirror post page	EX-02: abs. timestamp Jul 13 2026 19:54; 1 comment
SRC-10	imginn.com/p/DYzSkpHxPLo/	Mirror post page	EX-11: abs. timestamp May 26 2026 12:16; 2 comments
SRC-11	Web search: handle + "Zazie Productions"	Search engine	Handle disambiguation; unrelated entities (singer Zazie, Zazie Films, Zadig Productions)
SRC-12	castingcall.club/zazieproductions	Direct fetch	Adjacent public footprint (Class E): self-descriptions, press list, satire-persona link, education artifact
SRC-13	Image search: "Zazie Productions" album art	Search engine	Groover curator-profile existence; album art references
SRC-14	dumpor.io/v/zazieproductionsofficial/	Mirror attempt	JS-gated; no data
SRC-15	picuki.com, tikvib.com profile pages	Mirror attempt	Redirected/404; no data

Note on integrity: mirror re-services can lag or imperfectly count live metrics; bio and counts agreed across two independent mirrors (SRC-02/06), and post-level figures matched across grid and post-page views wherever both existed. No content was altered, and nothing from private or login-gated surfaces was sought or used.

Appendix E • Glyph & Codepoint Analysis (F-01 evidence)

Every non-standard character used as titling/signature on the profile, with Unicode identification. Determination: the system draws on APL programming notation, mathematical operators, and an Egyptian hieroglyph — a constructed 'machine-arcane' idiom consistent with the account's signal-corruption aesthetic. **No symbol with documented extremist, conspiracy-community, or hate-movement usage was identified in the visible sample.**

Context	Sequence	Identification
Bio	[glyph run: U+2330 U+27DF U+2367 U+23E7 · U+2353 U+2372 U+2351 U+210D U+238E]	APL functional symbols (U+2330, U+2367, U+23E7, U+2353, U+2372, U+2351) + double-struck H (U+210D) + APL symbol (U+238E) — reads as machine/cipher notation
EX-02 title	[hieroglyph U+13080] (prefixing ERR://LOOKED_BACK)	Egyptian Hieroglyph D004, eye (U+13080) + stylized error-message string ('ERR://' protocol-error convention)
EX-05 sign-off	[glyph run: U+235C U+2340 U+22C9 U+2359 U+2291 U+22CF]	APL symbols (U+235C, U+2340, U+2359, U+2291) + mathematical operators left-normal-factorial-semidirect-product (U+22C9) and curly logical and (U+22CF)
Highlight title	[pager-emoji] + U+26E1 + U+26F6 + U+2695/U+0308	Pager emoji + miscellaneous-symbol glyphs incl. shield-like and staff-like symbols, one bearing a combining diaeresis (U+0308) — modified-symbol construction

Appendix F · Glossary

Term	Plain-language meaning
IDM	Intelligent dance music — experimental electronic genre (Aphex Twin lineage); core scene for this account
Eurorack / modular synth	Reconfigurable hardware synthesizer format; the account improvises on it with peers (EX-01)
VST plugin	Virtual studio plugin — software instruments/effects; EX-04 discusses a boutique plugin maker
DSP	Digital signal processing — the math behind audio manipulation
ESP32	Hobbyist microcontroller board used in DIY audiovisual art (EX-02 tags)
Cue Tube	Service supplying short films for composers to (re)score as practice/portfolio exercises — relevant to credit clarity (F-05)
ARG	Alternate reality game — immersive fiction format; adjacent target market per the account's own positioning
Analog horror	Horror genre styled as degraded analog media (VHS/VHS-text aesthetics); aesthetic kin to this account's signal-corruption look
Adversarial audio/ML	Research on audio signals that deceive or stress machine-learning systems — the likely nature of the F-02 'malware zine' contribution
ER	Engagement rate — $\text{likes} + \text{comments} \div \text{followers}$; the audit's core comparative metric (§5)
Follow-back growth	Audience-building by mass-following accounts to trigger reciprocal follows — the pattern §5.3-H1 identifies in the ratio data
OSINT / PoC	Open-source intelligence / proof-of-concept — standard infosec research vocabulary appearing in TG-06

— End of report · ZP-IG-2026-0819 · v1.1 · Prepared by Arena.ai Agent Mode · Data snapshot 2026-08-19 —
