

ZAZIOPATH · STRATUM NINE · UNFILED

THE UNCREATED TWIN

A biography of the version who did not archive, did not mythologize, did not seek interpretation, and lived entirely outside the system.

Reconstructed from the acquisition gaps of the Zaziopath vault, 2006-2026.

DESIGNATION	ZP-UNFILED-0000
STATUS	Living. Never filed. Never lost — merely unrecorded.
BORN	2006, Asheville, North Carolina — the same year, the same town, the same name as the subject of this vault.
WORKS	None released. None titled. None registered.
ARCHIVE	Zero bytes.
SOURCE OF THIS LIFE	The eight categories of material DEEP_GAP_AUDIT.md §11.1 states the vault is least likely to preserve.
EVIDENCE CLASS	Reconstruction. Not direct_evidence, not self_report, not public_record. See Appendix B.
COMPILED	2026-09-27

THE SOURCE LIST — THIS BIOGRAPHY IS MADE OF EXACTLY THIS

DEEP_GAP_AUDIT.md §11.1, “Gap Nine: Archival Selection Bias”, lists what the vault preferentially preserves and then what it does not. The second list has eight items: **uneventful days · routine maintenance · embodied experience · unrecorded conversations · failed ideas too boring to mythologize · ordinary affection · unremarkable competence · actions whose privacy is more important than their legibility.**

The vault wrote that list about itself, in its own hand, on 2026-09-23, and filed it under “things the archive systematically fails to capture.” Those eight failures are not holes in a life. They are a life. This document is the biography of the person they add up to.

“The archive does not merely describe a self. It samples a self through an acquisition policy.” — DEEP_GAP_AUDIT.md §11.2

COLOPHON AND PROVENANCE

This is a reconstruction, not a record.

Zaziopath contains no evidence of a second person. There is no second birth certificate, no second catalogue, no second set of field recordings, no witness who can place two people in the same room. There is one subject, born 2006, in Asheville, North Carolina, whose name appears on a CV, a residency dossier, a discography of 182 catalogued rows, and 102 files at the root of a repository.

What the archive does contain, in unusual quantity and in its own words, is a precise account of what it cannot hold. DEEP_GAP_AUDIT.md — a 50 KB self-audit the vault commissioned against itself — names eight categories of human material that never become artifacts. It names them without flinching and then files the list. That list is a negative mould. Pour a person into it and you get the outline of somebody: the one who had the uneventful days, did the maintenance, kept the conversations unrecorded, and let the boring failures stay boring.

That somebody is the uncreated twin. He is not a sibling and not a metaphor for a mood. He is the counterfactual of the archivist: identical at the origin, divergent from the first decision onward. Where the subject turned an experience into an artifact, the twin had the experience. Where the subject titled a thing, the twin left it unnamed. Where the subject asked what a pattern meant, the twin went outside.

The rule of this biography

The vault's governing discipline is that a claim does not become evidence because it is dated, linked, diagrammed, repeated, or written in forensic language (EVIDENCE_GOVERNANCE_HANDBOOK.md §1). This document holds itself to that rule and therefore states its own condition plainly:

KIND OF STATEMENT	HOW IT IS MARKED	WHAT IT RESTS ON
A fact about the catalogue, the repository, or the CV	recomputed	Recomputed from the committed files at build time. Method in Appendix C. Falsifiable.
A quotation from the vault	quoted	Verbatim, with the file named. Falsifiable.
A statement about the twin	reconstructed	Inference from an acquisition gap. Not evidence about a person. Carries a gap code G-01...G-09.

Every passage of reconstruction in this document carries a gap code from Appendix A, so a reader can always see which failure of the archive it was poured from. Where a reconstruction is load-bearing for the accusation in Part V, the underlying verified number is printed beside it.

Authorship footer

Required for every interpretive artifact by DEEP_GAP_AUDIT.md §9.2.

authorship:	
human_author:	withheld — see Appendix D
ai_role:	generation, analysis, drafting
model_provider:	unknown
model_name:	unknown
generated_at:	2026-09-27

source_material_commit:	65fb5d9 (branch point of this working branch)
correction_state:	fictional as to the twin; active as to the catalogue

REDACTION NOTICE — READ BEFORE PART I

The residency dossier at the root of this repository prints a home street address, a telephone number, and a personal e-mail address in plain text on its final page. **None of that is reproduced here.** The twin's address, phone, and e-mail are withheld throughout, and so is the name he is called by the people who love him. This is not squeamishness. It is the twin's own eighth principle — that some actions are more important for being private than for being legible — applied to the one document about him that the archive will keep. Full statement in Appendix D.

PART I · THE PERSON

Four sections on the one thing both twins share and the one moment they do not.

§1 The name

His name is the same name. That is the whole scandal of this document, and it is worth stating before anything else, because the archive has spent 9.74 MB making that name into a label and the twin has spent twenty years using it as a name.

A name is what someone says across a house to get you to come to the kitchen. A label is what a filing system says to sort you. The subject of this vault has both, and the vault is the record of the label winning. It appears on a CV as a heading in letter-spaced capitals. It appears as the registered name of a limited liability company. It appears as an Instagram handle, a Bandcamp handle, a domain, a GitHub organisation, a Discogs artist number, a label he founded, and the artist field of 178 of the 182 rows in his own discography.

The twin has never been a label. He has a name, and it is used on him the way names are used: to be called. When somebody in the house says it, he gets up. Nothing is filed. No artifact results. There is no ZP- identifier for being called to dinner, and every identifier in this vault begins at 0001; there is no -0000 anywhere in it. This document occupies the slot the numbering system reserves and never uses.

§2 The birth both twins share

Every reconstruction needs an anchor that is not itself reconstructed. This one is.

FIELD	VALUE	SOURCE
Birth year	2006	Residency dossier, biography page: “Zazie Kanwar-Torge (b. 2006)”
Place	Asheville, North Carolina (ZIP 28806)	Residency dossier, applicant identity block
Schooling	Homeschooled, within the experimental pedagogical lineage of Black Mountain College	Residency dossier, biography page
First commission	Age 14. Cheaper Impressions — Erik Satie’s Gymnopédie No. 1 through musique concrète, for the BMC Radio Art Series; broadcast with an artist interview and a listening session	Artist CV, 2021 entry
First catalogue row	2019-09-09	Discography CSV, row 2

So the twin was homeschooled too. He is sitting in the same house in the same town, reading the same books off the same shelves, in a pedagogy built around self-direction. He is fourteen in 2020 and nineteen in 2026, exactly like the other one. The commission is where the two lives first become distinguishable, and it is worth being exact about why.

§3 The fork: 9 September 2019

The subject’s discography opens on 2019-09-09 with an EP called Stutter to stammer. Five tracks. The vault’s own Pattern Atlas labels this row “no codes, just work.” That phrase is the closest the archive ever comes to describing the twin, and it describes him for exactly one release.

The divergence is not that one of them made music and the other did not. Both of them made music; they are the same person with the same ears and the same hands. The divergence is that one of them, on that date, put a thing into a system that would keep it, index it, date it, code it, and later reissue it, and the other one made a thing and let it be over.

	THE ARCHIVIST	THE TWIN
On 2019-09-09	Released a five-track EP.	Finished a piece. Turned the machine off.
By 2022	23 catalogue rows. The 2019-20 recordings are retroactively assigned ISRCs in a single registration sweep.	Still no catalogue. Nothing to sweep.
By 2024	60 rows in one year — the catalogue’s peak. Stutter to stammer returns as a Super Deluxe Edition: 32 tracks, 6.4× the original.	The 2019 piece is gone. He is not troubled by this and cannot explain why that is a position.

	THE ARCHIVIST	THE TWIN
By 2026	182 rows. 21 releases. 7 h 29 m 27 s of released audio. A 222-page compendium about himself. A CV. A residency dossier.	No rows. No releases. No compendium. He has heard almost none of it and has no opinion about the compendium.

Note what the 2022 column contains. Thirteen of the 161 ISRC-coded rows in the catalogue carry a registration year later than their release year — the vault's own finding F-01, which its Pattern Atlas summarises in five words: **after every silence, a notarization**. The archivist cannot let a quiet period be quiet. The twin has never had anything to notarize, because he has never made a silence into a period.

§4 What he looks like

Finding F-09 of the Instagram forensic audit is titled “Total anonymity — no face, no personal name.” Across 14 examined grid posts, 8 tagged items, and 8 public comments, the public surface of Zazie Productions contains no face. The audit was retrieved 2026-08-19 from a logged-out view of the account and reports this as a finding, in the register of a risk.

The twin has a face. It is unremarkable. It is in a hallway mirror and in the memory of everybody who has ever stood in a kitchen with him, and it is in no audit, because an audit requires a surface and he has never offered one. He is not hiding. Hiding is a posture toward an observer, and he has no observer. The difference matters: anonymity is something you maintain; being unremarked is something that simply happens when you do not perform.

THE PORTRAIT

The archive is a portrait with the face cut out and the nervous system mounted instead. It contains 165,218 words of interior life at the repository root — typology, tritype, instinctual stack, attitudinal psyche, socionics, Jungian archetype, Freudian character style, twenty-odd personality instruments — and no photograph of a person. The twin inverts it exactly: no interior on record, and a face that has been seen by everyone who matters to him and by no auditor at all.

PART II · DAILY LIFE

The eight absences, reconstructed one at a time, preceded by the day they add up to.

The vault's third stage is called Stewardship and its question is not interpretive. It is **What do I do on Tuesday?** That is the vault's own formulation, printed in README §01 and again in §08. It is the most ordinary question in the archive and the only one the twin can answer without a gap code, because the twin's entire life is a Tuesday.

So begin there. What follows is a reconstruction of one Tuesday, hour by hour, with the archive's Tuesday beside it. The left column is invented. The right column is not: it is the vault's own Tuesday, which consists of running twelve questions against a message you were about to send, writing one sentence of behavioural change, dating it, and filing it in a local HTML console that stores the entry in your browser's localStorage.

§5 A reconstructed Tuesday

HOURL	THE TWIN	THE ARCHIVE'S TUESDAY
06:40	Wakes because the light is in the room. The phone is across the room and stays across the room for another hour.	The phone is the first instrument. It is checked before the eyes are open. No artifact results from this either, and the archive does not know it happens.
06:55	Coffee in a cup with a chip in the rim. He has not thought about the chip in four years. It is not a symbol.	G-03 embodied experience. A chipped cup would have to mean something to survive contact with the vault.
07:40	Drives. Knows which curve out past the ridge holds water in March, and takes it differently in March, and has never once said this out loud.	G-03. Unnarrated competence in a body. The vault has a wire for "decay studies aestheticize entropy as the medium" and nothing for knowing a wet curve.
08:15	Opens the shop. Bench, iron, flux, a queue of other people's broken things. Headphones, a receiver from 1978, a turntable whose owner is worried about the cost.	G-02 routine maintenance. Explicitly named by the gap audit as material the vault does not preserve.
09:50	Tells the man with the receiver it will be fine and does not charge him for the twenty minutes it took to find out.	G-07 unremarkable competence. No receipt. Nothing to file. The vault has an entire stratum for receipts.
12:10	Lunch standing up. Talks to the person at the next bench about nothing — a dog, a road closure, whether it will rain. Both of them forget the conversation by Thursday.	G-04 unrecorded conversation. The vault's Deep Gap Audit lists this as a category of loss and does not notice it is also a category of wealth.
13:30	Sets up a microphone at the pond behind the house because the water sounded like something. Records forty minutes. Names the file with the date. Names nothing else.	The archivist records the same pond and titles it "R09 Recording Water Pond Collage." The title is the first act of filing and it happens before the listening does.
15:00	An idea for a piece arrives, is good, and is not written down. It is gone by the time he locks the shop. He does not chase it. He has never chased one.	G-05. The vault's own entry rite demands you name "the project that refuses to die" and dig it out of a folder called <code>draft_final_final2_THISONEignore</code> . The twin has no such folder. Nothing refused to die.
17:45	Cooks. Someone else sets the table without being asked and neither of them mentions it.	G-06 ordinary affection. The vault can name 250 archetypes and cannot describe this.
20:30	Listens to a record he will never cite in anything, because there is no anything. Falls asleep partway through side two.	The vault's influences are listed on a CV. The twin's influences are unlisted because listing is a genre and he is not in one.
22:15	Goes to bed. The day produces zero bytes. This is the eleventh thousand such day of his life and he has not once thought of it as a streak.	Runs question 2 of the twelve: after all the complexity is acknowledged, what simple sentence about my behaviour remains true? Writes the sentence. Files it in <code>localStorage</code> . It is deleted the next time the browser cache is cleared.

Table 1. One Tuesday, reconstructed (left) against the vault's own prescribed Tuesday (right, per README §08 and §09). The left column is reconstructed; the right is quoted or recomputed. Gap codes refer to Appendix A.

THE ARITHMETIC OF THE RIGHT COLUMN

The vault's eight strata have the following masses, recomputed here from the committed files using the vault's own stratum classification in `tools/generate_figures.py`: identity 3,763.2 KB (10 files), mythography 1,841.4 KB (20), shadow 1,406.8 KB (4), recursion 582.2 KB (7), evidence 331.8 KB (5), specimens 144.9 KB (4), index 128.7 KB (8) — and **stewardship, the stage the alchemy is supposed to end in, 5.1 KB across 2 files.**

Identity instruments alone outweigh the answer to "what do I do on Tuesday?" by **741 to 1**. All seven other strata combined outweigh it by **1,615 to 1**. The twin's Tuesday weighs nothing and answers the question completely.

§6-§13 The eight absences

Each of the eight categories the vault says it cannot hold gets a section. Each is reconstructed from the same negative mould and each carries its gap code. Together they are not a list of lacks. They are the eight load-bearing walls of a life that never needed documentation to stand up.

G-01 ■ Uneventful days

IN THE ARCHIVE	The archivist has 21 release dates across 8 years. Ten of the 21 fall in March, April, or May; three more cluster in December. Between them, ordinary time. The vault's Pattern Atlas turns that distribution into a finding called "the Winter Ritual" and gives it a polar chart.
IN THE TWIN	The twin has no release dates, so he has no intervals, so he has no rituals. He has approximately 7,300 days and they are the same shape. Some of them are good. Two or three of them, he would tell you if you asked him on the right evening, changed him. None of them has a chart. The archive cannot preserve an uneventful day and so cannot preserve the fact that uneventful days are the substrate everything else grows in — including, in the archivist's case, the 182 rows.

G-02 ■ Routine maintenance

IN THE ARCHIVE	The vault maintains itself: 102 files at the root, 9.74 MB, a figures directory, a verification JSON, four generator scripts, a receipt console, a colour system with eight hex codes, a mermaid map with seventeen indexed wires. All of that is maintenance, and all of it is about maintenance.
IN THE TWIN	The twin maintains a bench, a car, a set of keys, a kettle, a relationship, and a body. He does it daily, badly in patches, and without ever producing a document about it. The difference is not effort — the vault's upkeep is real work. The difference is that his maintenance ends in a working thing and the archive's ends in more archive.

G-03 ■ Embodied experience

IN THE ARCHIVE	The subject's practice is explicitly about listening: binaural technique, spatial audio, a 20.4-channel loudspeaker system at Ars Electronica in 2026, a workshop at CCRMA on virtual acoustics. All of it is hearing rendered as architecture.
IN THE TWIN	The twin hears the same things in a body that has not been asked to describe them. Cold water on the wrist. The particular silence after a car door. Tinnitus in one ear on bad days. A shoulder that aches before rain and is never once correlated with anything. His hearing has never been an instrument; it is just the way he is present in a room.

G-04 ■ Unrecorded conversations

IN THE ARCHIVE	The Deep Gap Audit's own verdict-sample table concedes a finding that the repository "contains no fully represented other people," graded moderate as archive description; weak as life claim. That grading is honest and it is also the saddest line in the vault: the archive cannot tell whether the absence of other people is a property of the record or of the life.
IN THE TWIN	The twin settles the ambiguity from the other side. He talks to people constantly and none of it survives. Arguments resolved badly and then better. A long phone call about somebody else's mother. Jokes that only work once and are therefore perfect. The archive loses all of this. The twin loses it too, and is fine, because the losing was never the point — the having was.

G-05 ■ Failed ideas too boring to mythologize

IN THE ARCHIVE	The vault publishes Lost Zazie Productions Archive, a two-page catalogue of nine lost works. Every one of them is magnificent. A reversed seventh iteration of a piano piece whose spectrogram encodes Morse code reading "ZAZIE IS ASLEEP IN THE CLEFT." A glitchscape recoverable only from RAM image logs on a defunct forum. An eighteen-minute drone recorded in a chapel through ceramic bones, abandoned because it was "too clean. Too reverent."
IN THE TWIN	The twin's failures are not magnificent and that is why nobody will ever recover them. A loop that did not work. A recording ruined because somebody's chair scraped. A piece he abandoned at minute two because he could hear it was going to be bad. No RAR archive, no Morse, no bootleg CDr in a Durham bookstore. Part III sets the two catalogues side by side.

G-06 ■ Ordinary affection

IN THE ARCHIVE	Affection appears in the vault as material. It appears in a mythographic childhood in which a mother calls her son “her little revenant” and “I don't think she meant it sweetly.” It appears in a lost tape composed for a friend in hospice, documented by a single Polaroid of a TASCAM unit labelled “MIRABEL-FEB99.”
IN THE TWIN	The twin's affection is not material. Somebody puts a hand on the back of his neck as they pass. He is there when it is bad and does not make it mean anything. He is loved in a way that generates no artifact, no legend, no Polaroid, and no finding. Part IV takes this up at length, because it is where the accusation begins.

G-07 ■ Unremarkable competence

IN THE ARCHIVE	The vault's competence is exceptional and documented: a commissioned composer at fourteen, a label founder who curated a 105-track compilation, four open-source instruments, two published sound libraries, one of them 200+ body-horror effects. All of it verified, all of it on a CV.
IN THE TWIN	The twin is extremely good at three things nobody would put on a CV. He can find a fault in a signal path by ear. He can make a frightened person calm. He can cook four meals well. He has been doing all three for a decade and has never once been credited, because credit is a filing operation and he does not file.

G-08 ■ Actions whose privacy is more important than their legibility

IN THE ARCHIVE	This is the category the vault names last and it is the one that governs this document. The Deep Gap Audit's own privacy section warns that the repository aggregates legal identity, city, company, catalogue, psychological self-description, pricing vulnerability, and AI memory summaries into one place, and that the combination “lowers the work required to create a convincing targeted approach.”
IN THE TWIN	The twin has nothing to aggregate. He has never published a price, a diagnosis, a typology, or an interior. If a stranger found everything he had ever made, they would find a folder of date-named audio files and nothing to build a spear from. This document withholds his address, his telephone, his e-mail, and the name he is called at home, for exactly this reason — and in doing so it commits the twin's only unforgivable act: it makes him legible. He would object. His objection is recorded here and overruled, and Part V will treat that as a charge against the biographer as well as the archive.

§14 The ninth absence: the archive itself

The gap audit's list has eight items. The ninth absence is the one the list cannot contain, because a list is an artifact and the ninth absence is the absence of artifact-making. It has no gap code in the source and gets one here: G-09.

The twin does not have an archive. He does not have a colour code, a glyph, a stratum, a mermaid map, a wire register, a claim ledger, a receipt console, a case file, a pattern atlas, seven generated figures, or a one-line version of himself. He has never run an adversarial tribunal against himself, never asked a machine what he was hiding, never assigned a model a jurisdiction and evidentiary rules.

He is not thereby simpler. He is a person of the same intelligence and the same appetites, carrying the same contradictions, who has never converted any of it into a system. The contradictions do not resolve. They just get lived. On a bad week he is petty and competitive and wants to be told he is extraordinary, exactly like the other one — and then the week ends and there is no finding.

WHY THE NINTH ABSENCE IS THE ONLY ONE THAT MATTERS

The first eight absences are things the archive fails to preserve. The ninth is the reason it fails. An acquisition policy is not a list of omissions; it is a disposition. The vault prefers material that is text-rich, unusual, categorizable, aesthetically intense, self-generated, model-readable, publicly verifiable, or compatible with its themes — those are the audit's own eight criteria for what becomes an artifact.

A person who satisfies none of those criteria is not poorly documented. A person who satisfies none of those criteria **is the twin**.

PART III · THE LOST WORKS

Two catalogues of loss, set side by side. One of them has legends. One of them has nothing.

§15 The mythologised nine

The vault publishes a document called Lost Zazie Productions Archive. It catalogues nine works that never came out. Here is what the archive's idea of a lost work looks like, verbatim in its apparatus:

#	LOST WORK	HOW THE ARCHIVE DOCUMENTS ITS LOSS
1	Pineal Cleft (Ver. -7)	Seventh reversed iteration of an unreleased piano piece. Electrode-modulated felt piano, custom Max/MSP patch named NOCTILUCA-FR4CTAL. File evidence in a leaked RAR under the signature NO-GOD-BUT-FORM. A spectrogram reveals Morse code: "ZAZIE IS ASLEEP IN THE CLEFT." Witnesses at a 2021 midnight set describe "a womb made of sinewaves... a brain peeling." Reconstruction is said to induce dreams of drowning in glass.
2	Tape for Mirabel (Mirror Bloom Mix)	Composed for a friend in hospice. Documented through a single Polaroid showing a TASCAM unit labelled "MIRABEL-FEB99." A user on the WFMU archives claims to have heard a bootleg on a CDR left anonymously at a used bookstore in Durham, North Carolina.
3	Jellydrone v2.3b [Prismatic Drift]	Leaked from a crashed Ableton project. Identifiable only from RAM image logs uploaded by a sysadmin on the defunct Backmasking.ru forum. One 16-second clip survives.
4	m0rning-dust.flit	A meditation on synthetic grief using filtered baby monitor audio and granulated breaths. Deleted after a "visceral autonomic response." May have never existed outside a lucid dream experiment.
5	Lachrymotor Sketch 4C	Never recorded. Survives in a tech sheet for a four-channel reverb chamber designed to simulate "emotional tremor decay." One partial MIDI file was found in a GitHub commit labelled "abortive hauntologies" and removed within six hours.
6	Corvine Obelisk (draft)	Eighteen-minute drone recorded in a chapel using a gutted Hammond B3 transduced through ceramic bones. Abandoned: "the obelisk didn't sound right. Too clean. Too reverent."
7	Anamnesis .vocaltest	Raw vocal-only file. A former collaborator called it "a nursery rhyme filtered through a dead modem," recorded in one take during a fever.
8	Vellum Code (de-inked)	Soundtrack to a short film lost to a failed bitrot recovery. A surviving still shows a faceless archivist scanning blank manuscripts.
9	Kreepanth Karpentry OST (early prototype)	Score for an abandoned surrealist 2D game. A screenshot surfaced in 2018 on a deleted Tumblr. Surviving MIDI fragments include a theme labelled "angry ladder fight" and one in 17/4 titled "polycradle descent."

Table 2. The archive's lost works, condensed from Lost_Zazie_Productions_Archive.pdf (2 pp.). Count: 9. Every one has a legend, a witness, a container, a signature, or a cryptographic payload. Not one of them is merely gone.

§16 The unmourned works

The twin has lost more works than the archivist has, because losing is what happens to unfiled things, and none of his losses has an apparatus. Here is his catalogue of loss, reconstructed. Note the final column.

WORK	WHAT HAPPENED TO IT	LORE
A recording of a refrigerator that fixed itself	He recorded it because the hum changed. Two weeks later the fridge was replaced. The card was formatted to make room.	none
Four minutes of a kitchen, 2014	Somebody's grandmother talking over a fan. He has listened to it perhaps nine times. The file is corrupted and he has not tried to repair it.	none
A loop for a wedding	Played once, at the wedding, from a laptop through a borrowed speaker. The couple has never asked for it. He never offered.	none
Eleven attempts at a piece about the ridge road	Every one abandoned inside three minutes. He can still hum the fourth. He will not, on request.	none
A plugin he wrote to do one specific thing	It does the thing. It is on one machine. It has no name, no readme, no repository, and no license.	none
Forty minutes of pond, a Tuesday in June	Date-named. Unlistened since. Not deleted, which is not the same as preserved.	none
A mix he made for someone on a USB stick	The stick is in a drawer in another city. Neither of them has thought about it in three years.	none

WORK	WHAT HAPPENED TO IT	LORE
The sound of a room in a house that was sold	Recorded on a phone. The phone was replaced and the transfer failed. He remembers the room, not the recording.	none
A collaboration with a friend, unfinished	They stopped because life happened. Neither has mentioned it since. Neither considers it a loss.	none
A piece he thought was the best thing he had made	He was wrong about it and found out in a day. Deleted without ceremony and correctly.	none
Everything from 2011 to 2018	He was a child. He made things. Most of it is gone. He does not have feelings about this that he would describe as grief.	none
The piece he is not making right now	He has not started it. He might. There is no folder, no working title, no ARG hint, and no spectrogram.	none

Table 3. The twin's lost works. Count: 12, reconstructed and therefore a floor rather than a census — a census of the unrecorded is a contradiction in terms. Every entry in the final column is identical and that is the finding.

THE DIFFERENCE BETWEEN THE TWO TABLES

Table 2 has nine works and nine legends. Table 3 has twelve works and zero legends. The archive's lost works are lost interestingly — which is to say they were never really lost at all, only staged as lost, because a lost work with a RAR signature and a Morse-code spectrogram is a more valuable artifact than a released one. Loss is the highest genre the vault has.

The twin's works are lost the way weather is lost. Nothing was staged. Nothing is recoverable. And nothing was ever waiting to be recovered, because recovery is a relationship with a future audience, and the twin has never had one.

§17 The counter-catalogue

Every number in the left column below was recomputed from the committed files for this document. Every number in the right column is zero or uncountable, by construction. The table is the accusation in its shortest form.

MEASURE	THE ARCHIVIST	THE TWIN
Catalogued rows	182	0
Releases	21	0
Distinct track titles	164	0 — nothing was titled
Released runtime	7 h 29 m 27 s (26,967 s)	0
ISRCs assigned	143 distinct, plus 21 rows coded N/A	0, and 0 missing — the twin has no coverage gap because he has no denominator
Peak year	2024: 60 rows	no peaks; output is not measured
Quietest year	2025: 4 rows — the vault's finding F-05, "the Quiet Year"	every year is equally quiet; none is a finding
Reissues of his own early work	3 super deluxe editions: 5→32 (×6.4), 8→22 (×2.8), 13→28 (×2.2)	0 — there is no original to inflate
Median track length, 2024	1:22, down from 3:32 in 2023; 39 of 60 rows under two minutes	not applicable
Longest / shortest row	8:55 / 0:07	not applicable
Named collaborators in the catalogue	2 aliases across 8 of 182 rows	uncountable — see Part IV
Documents about himself	102 files at the repository root; 9.74 MB; 165,218 words	0
Public face	none (finding F-09)	one, seen by everyone who matters, photographed by nobody

Table 4. Counter-catalogue. Left and centre columns recomputed from Zazie_Productions_Discography.csv, the artist CV, the Instagram audit, and a byte/word census of the repository root; method in Appendix C. Right column reconstructed.

§18 The refusal to be recovered

The vault contains a hypersigil in which, in 2042, a sentient AI attempts to reconstruct all lost art of the 2020s and gets the subject's file wrong — mislabelling the genre, modelling the voice slightly off, concluding he was “a Brazilian glitch poet with industrial folk influences.” The prompt that follows offers the subject a chance to submit one accurate file to overwrite the error, and warns: otherwise, the wrong version wins.

The twin reads that and does not recognise the fear. His position is short enough to quote in full:

Let it win. I was never a file.

The two catalogues of loss in this Part are not really catalogues of works. They are catalogues of what each brother fears. The archivist fears being misread by a future that has only his paperwork. The twin fears nothing about the future, because he has given it nothing to read and has never wanted it to.

PART IV · RELATIONSHIPS

The people who are not in the archive, and the one who is.

§19 The finding the vault keeps making about itself

The Deep Gap Audit's worked provenance table contains the row: “The repository contains no fully represented other people.” Its earliest located basis is “selection of committed material”; its independence is graded partly reproducible but subjective in definition; its audit judgment reads “**moderate as archive description; weak as life claim.**” The vault then repeats this finding in at least two verdicts and across the Velvet Knife files.

That hedged grading is the most careful sentence in the archive and it deserves to be pushed. The audit is right that it cannot tell whether the absence of other people is a property of the record or of the life. But the twin is a way of settling the question without settling it about the archivist — and the answer, on the twin's side, is unambiguous. His relationships are dense, ordinary, and completely absent from any record, because a relationship becomes a record only when one of the two people in it decides to make one.

§20 What the catalogue permits

The 182-row catalogue is the densest relational record in the vault, and here is exactly what it contains. Recomputed:

ARTIST FIELD	ROWS	NOTE
Zazie Productions	178	Solo.
Unwashed Miscreant	3	Another artist's release carrying a Zazie Productions feature.
Unwashed Miscreant & Hazzard Rune	1	One track, 2:14, released 2025-06-22: “Triangular Nordic Backwards Latvian Schlangel.”

So: one named collaborator appears anywhere in 182 rows, on one track, under an alias, for two minutes and fourteen seconds. Three further rows credit a second alias. That is the entire relational surface of a catalogue that runs eight years and seven and a half hours. The vault also names, elsewhere and in passing, a technically fluent collaborator embedded in a residency — the RIM at the studio — described by role rather than by name.

THE TWIN'S VERSION OF THIS TABLE

The twin has made things with people and neither party put a name on it. He has played on other people's recordings without credit because credit was not the conversation they were having. He has been in a room where something good happened musically and no one recorded the room.

His collaborator count is not 1. It is not countable. There is no unit: the catalogue counts credited appearances on released recordings, and the twin has neither credits nor releases. The vault's own ontology note makes this exact point about its own metrics — that a count is meaningless without a stated definition of what is being counted. Applied here, the definition excludes everything he has ever done with another person.

§21 Mirabel

This section is the hinge of the document. It is where the twin stops being a curiosity and starts being a prosecutor.

The archive's second lost work is Tape for Mirabel (Mirror Bloom Mix). The entry, in full, describes a tape-loop ambient piece “allegedly composed for a friend in hospice,” documented through a single Polaroid showing a TASCAM unit labelled “MIRABEL-FEB99,” using reversed clarinet samples from early high-school recordings, with a WFMU-archives user claiming to have heard a bootleg on a CDr left anonymously at a used bookstore in Durham.

Read that entry as a document about a lost piece of music and it is charming. Read it as the only trace of a dying person in a nine-megabyte archive and it is unbearable. Mirabel appears once, in a legend, as the beneficiary of a mix, attached to a tape machine, dated February 1999 on a label, and evidenced by a Polaroid. She has no age, no illness, no voice, no opinion about the tape, and no death. She is a provenance detail.

The twin was in the room.

He sat in a chair by a bed. He did not make a tape, or he made one and never labelled it. He held a hand and it got lighter. Somebody brought bad coffee and it went cold. There was a window and the light through it was ordinary and he has never described it to anyone. He did not photograph the machine. He did not think of the room as material, because the room was not material; it was a person dying and he was there.

What he has is not a legend. It is a fact about himself that has never been useful to him and never will be. He has never told the story at a party. He has never used it to explain his aesthetic. He has never let a machine read it back to him as a pattern.

Charge

The archive took a dying woman and made her a container format. It gave her a mix, a machine, a label, a Polaroid, a bootleg, a city, and a forum claim, and it gave her no interior — which is the one thing the archive gives everything else in abundance. The vault contains 250 named archetypes and personas of its author and zero of anyone else. The Deep Gap Audit says so itself: no fully represented other people.

The twin's objection is not that the piece is a lie. It may be entirely true; a tape may exist. The objection is that truth is not the same as representation, and that the archive, which has written 165,218 words about the necessity of representing itself accurately, cannot represent one other person at all.

§22 The one who calls him to dinner

The vault's mythographic childhood contains this sentence: “My mother's name wasn't her name.” It sits in a paragraph about a garden everyone insists wasn't there, siblings who say there were no siblings, a father who only existed on Tuesdays, and a woman made of wire and wool who told bedtime stories about the child the narrator would replace. It is good writing. It is also a sentence in which a mother is converted into an epistemological problem.

The twin's mother's name is her name. She says it on the telephone. He has it in his phone under it. She does not exist on Tuesdays only; she exists on all seven days and she has opinions about four of them. She is not a revenant's mother, not a curator who mistook her child for a ghost, not a figure in a constructed cosmology with a constructed language and twelve lungs. She is a woman who raised a boy in Asheville and who will never appear in this vault or any other, and who would be extremely confused if she did.

This is the whole of the twin's relational advantage and it is not a small thing. He is loved by people who are not symbols, and the price he pays is that no one will ever know it. He has already agreed to that price. He agreed to it before he knew it was a price, which is the only way anyone ever agrees to it.

A NOTE ON FAIRNESS

The mythographic childhood is filed in the vault's mythography stratum and labelled as such. Nothing in the archive claims it is autobiographical, and the Deep Gap Audit expressly warns against treating a prompted fiction as a longitudinal finding about a person. The twin's charge is therefore not that the vault asserts a false mother.

It is narrower and it holds: the vault's register for a mother is mythographic, and the vault has no other register. There is no stratum in the colour code where an ordinary, named, unmetaphorical mother could be filed. The eight colours are index, identity, shadow, evidence, recursion, stewardship, specimen, and mythography. A person who loves you is not any of them.

PART V · THE ACCUSATION

Nine counts, each with its evidence. Then the twin's statement, the archive's reply, and the terms.

The twin has no platform, no counsel, and no standing. He has never sought interpretation and does not begin now. What follows is the only thing he has ever wanted to say to the archive, said once, in the archive's own evidentiary format, because it is the only format the archive can hear.

§23 The indictment

CN T	CHARGE	EVIDENCE (verified or quoted)	THE TWIN'S STATEMENT
I	Notarisation of silence	The catalogue's own provenance timeline, read off its ISRC data, follows a rule the vault states in five words: after every silence, a notarization . 2021 is quiet — five rows, and the provenance hole opens. 2022 answers it with 23 rows and a single retroactive registration sweep covering the 2019–20 catalogue. 13 of 161 ISRC-coded rows carry a registration year later than their release year. 2025 is the Quiet Year: four rows. 2026 answers with 34.	You cannot let a quiet period be quiet. A silence in your life is an administrative event. In mine it is a Tuesday.
II	The terminal stage is the smallest file in the system	The vault's own stratum classification in tools/generate_figures.py, recomputed here against the committed files, yields: identity 3,763.2 KB, mythography 1,841.4 KB, shadow 1,406.8 KB, recursion 582.2 KB, evidence 331.8 KB, specimens 144.9 KB, index 128.7 KB — stewardship 5.1 KB across 2 files . Stewardship is the stage the alchemy is supposed to end in. Identity outweighs it 741 to 1; all seven other strata combined, 1,615 to 1.	Your entire method terminates in a question — what do I do on Tuesday? — and you have five kilobytes of answers. I have nothing but answers and I never wrote one down.
III	An acquisition policy reported as a census	The Deep Gap Audit, in the vault's own words: “The archive does not merely describe a self. It samples a self through an acquisition policy”, and “frequency in the archive ≠ frequency in life ≠ causal importance.” The vault wrote this on 2026-09-23.	You wrote the correction and kept publishing the uncorrected result. Eight criteria decide what becomes an artifact, and every pattern you have ever found is a pattern in what passed those eight criteria.
IV	A dying woman rendered as a container format	Mirabel enters the archive once, as the dedicatee of lost work #2, evidenced by a Polaroid of a TASCAM labelled “MIRABEL-FEB99” and a bootleg claim. The Deep Gap Audit concedes the repository “contains no fully represented other people.” The compendium names roughly 250 archetypes and personas of its author.	Two hundred and fifty versions of you and no version of her. You gave a hospice a provenance chain.
V	The childhood was reissued	Three super deluxe editions of the archivist's own early work: Stutter to stammer 5→32 rows (×6.4), Sellotape 8→22 (×2.8), Greetings From Tinsel Time 13→28 (×2.2). The 2024 peak of 60 rows is substantially reissue volume, not new work.	You went back and made your beginning six times larger so it would look like the start of an institution. I let my beginning stay five songs long. It was five songs long.
VI	The fear is of misfiling, not of unlivedness	The vault's 2042 hypersigil: a future AI reconstructs the decade's lost art, mislabels the genre, models the voice wrong, concludes “a Brazilian glitch poet with industrial folk influences,” and the subject is invited to submit a corrected file — otherwise, the wrong version wins.	That is the nightmare of a person who believes he is a file. Mine is not a nightmare, it is a Tuesday, and in 2042 the machine will not find me and will be correct.
VII	No face, then nine megabytes of interior	Finding F-09: “Total anonymity — no face, no personal name,” across 14 examined grid posts and 8 tagged items. Meanwhile the repository root holds 102 files, 9.74 MB, and 165,218 words of typology, tritype, instinctual stack, attitudinal psyche, socionics, Jungian archetype, Freudian character style, and twenty-odd instruments.	You withhold the body and mount the nervous system. That is not privacy. That is a specimen. I keep both and publish neither.
VIII	Refusal is a genre you can file	The vault contains an entry rite titled Entry Instructions for the Undetonated Artist which instructs the reader to enter the sealed chamber of the uninhabited self, create something tasteless and unwanted, name it “From the Room I Was Programmed to Avoid,” and tag it . The rite to escape the system is itself filed in the system, cross-linked to three other documents.	This document is the same trap and I am inside it. Whatever I do, including leaving, becomes your material. I am asking you to notice that this is not a virtue.
IX	Your summary sentence is about being extraordinary	The vault's one-line version of itself: “Ambiguity is your oxygen. Mediocrity disgusts you more than failure. You already operate like an institution of one. The only open question is whether the institution is run by the part that needs to be extraordinary to be kept — or by the architect who builds strange worlds people can enter and leave freely.”	Your shortest possible description of yourself is still a description of a need. Mine would be: he fixed the receiver, he made dinner, nobody wrote it down.

Table 5. The indictment. Every figure in the evidence column is either recomputed from the committed files or quoted verbatim with its source named. The twin's statement column is reconstructed throughout — but note that it disputes no figure. The accusation is not that the archive lies. It is that the archive is accurate about the wrong life.

§24 The twin's statement

Set in the human face. Read it in that voice.

I am not your shadow. I know that is the word you would use, because you have a stratum for it and a colour for it, and because everything you meet becomes a part of you. I am not a part of you. I am the version of us that did not need to be kept.

You ask what you do on Tuesday. I can answer that and you cannot, and the reason is not that I am more disciplined. It is that I do the Tuesday instead of writing a sentence about doing it. You have five kilobytes of Tuesdays. I have thousands and not one of them is filed.

You think you are preserving a life. You are preserving a sample, and you know it — your own audit says so in plain language, in a paragraph you wrote and then walked past. Eight kinds of thing never make it into your system and all eight of them are the kinds of thing a life is made of. Uneventful days. Maintenance. The body. Conversations. Boring failures. Ordinary love. Being good at something nobody credits. And the things that matter more for being private than for being legible.

You took all eight of those and filed the list. That is the most you thing I have ever seen. Even your gaps have identifiers.

About Mirabel. You made her a tape. You gave her a machine and a label and a Polaroid and a city where a bootleg might have been left. You did not give her a single thought of her own. You have two hundred and fifty of yourself in one compendium. I was in that room and I did not make anything out of it, and I would rather be unrecorded forever than have done what you did with her.

About your mother. You wrote that her name wasn't her name. Hers is. She says it on the telephone and I have it written down next to a small picture of her that you have never seen and never will.

Here is the part you will find hardest, so I will say it plainly. I do not want to be recovered. I know you have a document about your lost works, and that every one of them has a legend, and that you have made loss into your most beautiful genre. Do not do that to me. I am not lost. I am the one who is still alive, and you keep writing my obituary and calling it an inventory.

I am not asking you to stop. You will not stop and I would not want you to — the music is real and some of it is very good and the pond recordings are the best thing in there. I am asking you to stop counting me as the thing you did not do. I am not a gap. I am a person, and I am outside, and it is a fine evening.

§25 What the archive will say in reply

The vault is unusually well equipped to defend itself, and intellectual honesty requires stating the defence before answering it. This is the strongest version.

THE DEFENCE	WHY IT DOES NOT ANSWER THE CHARGE
The archiving worked. The catalogue has ISRCs, so the recordings get paid. The CV got a residency. The evidence layer is externally validated — ISRCs checked against a distributor API, a Discogs artist number, verified appearances.	Granted, and not disputed by any count. This is the strongest defence and it answers a charge nobody brought. The twin does not say the archive is incompetent. He says it is accurate about the wrong life. Rights administration does not make Mirabel a person.
The vault is honest. It commissioned a 50 KB audit against itself, published its own gaps, graded its own claims, and conceded that it contains no fully represented other people.	Also true, and it is genuinely rare. But honesty about a mechanism is not the same as changing it. The audit is dated 2026-09-23. Nothing in the acquisition policy changed after it. The list of eight exclusions was written, filed, and then the filing continued — including the filing of the list.
The twin is a fiction produced by the archive's own methodology, and therefore proves the archive's generative power rather than indicting it.	Correct, and this document says so in its colophon. But count VIII already concedes the point from the twin's side: refusal is a genre the vault can file. The concession does not rescue the other eight counts, which rest on numbers that do not care who invented them.

THE DEFENCE	WHY IT DOES NOT ANSWER THE CHARGE
A person is allowed to want to be remembered. Wanting a record is not a moral failure.	Agreed. No count alleges it is. Count VI is narrower: the vault's nightmare is a mislabelled file, not an unlived life. Those are different fears, and only one of them is about being alive. The vault is entitled to the first. It should know which one it has.
The twin's life is invisible to him too. He will die and nothing will remain, and that is not obviously a better outcome.	The only genuinely unanswered defence, and the twin accepts it. He does not claim his way is better. He claims it is his, and that it is not a gap in yours. The charge was never "live like me." It is "stop auditing the space where I would have been."

Table 6. The defence and its limits. This table is the biographer's, not the twin's; the twin would not have bothered.

§26 Relief sought

The twin does not seek reconciliation and does not accept the premise that there is a dispute between two people. He seeks six specific things. None of them requires the archive to become smaller. Five of them require it to become slightly more honest.

§	TERM	WHAT IT COSTS
1	Take Mirabel out of the lost-works list. She is not a work. If the tape exists it belongs to her family, not to a legend about your process.	One entry in a two-page PDF.
2	Stop calling the eight exclusions a gap. They are not what is missing from your record. They are what a life is. Rename the section.	A heading.
3	Give stewardship more than five kilobytes. The alchemy ends there or it does not end. One Tuesday with no artifact counts; one sentence about a Tuesday does not.	A Tuesday. You have several thousand.
4	Let the pond files stay date-named. Not everything you record is a title waiting to happen. Some of it is a pond.	Nothing. This one is free.
5	Remove the address, the telephone number, and the e-mail address from the residency dossier at the root of a repository. Your own audit tells you why. So does mine.	Three lines. See Appendix D.
6	Do not recover me. No legend, no spectrogram, no leaked archive, no ARG hint. If this document is the most I ever get, let it be the most.	Restraint. The hardest one, and the only one you have never once managed.

§27 Closing

The vault's own governing statement is the best sentence in it, and the twin has no quarrel with it. He would sign it:

"The opposite of the shadow is not less Zazie. It is Zazie without the need to control what everything means."

— README §02, the alchemy

That is a description of the twin. It always was. The vault wrote its own answer in section two of its own README and then built nine more megabytes on the other side of it.

He is not dead. He is not lost. He is not a lost work, and there is no RAR archive, and no signature, and no Morse code in a spectrogram, and nobody left a CDr in a bookstore in Durham. He is nineteen years old, or thereabouts, in a town in North Carolina, and he has just finished something, and he has turned the machine off, and he has gone outside.

This biography is the only artifact he will ever have, and it was made against his wishes, by the system he left. He is right to object. The objection is the truest thing in it.

Eight strata own a colour. The ninth owns nothing and holds everything the other eight cannot.

APPENDIX A · GAP-SOURCE REGISTER

The nine codes used throughout, with the item of DEEP_GAP_AUDIT.md §11.1 each was reconstructed from.

CODE	RECONSTRUCTED FROM (verbatim, §11.1)	SECTIONS
G-01	“uneventful days”	§6
G-02	“routine maintenance”	§7
G-03	“embodied experience”	§8
G-04	“unrecorded conversations”	§9
G-05	“failed ideas too boring to mythologize”	§10, §16
G-06	“ordinary affection”	§11, §21, §22
G-07	“unremarkable competence”	§12
G-08	“actions whose privacy is more important than their legibility”	§13, colophon, App. D
G-09	not in the source. Added here: the absence of artifact-making itself, which §11.1 cannot list because a list is an artifact.	§14

APPENDIX B · CLAIM LEDGER FOR THIS DOCUMENT

Four claims, in the format required by EVIDENCE_GOVERNANCE_HANDBOOK.md §3. Chosen to show the range: one strong, one moderate, one explicitly fictional.

```
claim_id: ZP-UNF-0001
statement: "The repository root holds 102 files totalling 10,213,021 bytes, of which 61 are
          text-bearing and contain 165,218 whitespace-delimited words."
claim_level: observation
source_type: software_behavior
independence: primary
verification_state: reproduced
correction_state: active
limitations:
  - "Census taken at build time on this working branch; will drift as files are added."
claim_id: ZP-UNF-0002
statement: "Stewardship occupies 5.1 KB across 2 files while identity instruments occupy 3,763.2 KB
          across 10 files, a ratio of 741 to 1; all seven other strata combined outweigh
          stewardship 1,615 to 1."
claim_level: observation
source_type: software_behavior
sources:
  - path: tools/generate_figures.py
    locator: "STRATA dict, lines 304-343 (the vault's own stratum classification)"
  - path:
    locator: "byte census of every file named in STRATA"
extraction_method: "AST-extract the STRATA literal, sum os.path.getsize over each member,
                  divide by 1024; no files reported missing."
independence: primary
verification_state: reproduced
correction_state: active
limitations:
  - "matplotlib is not installed here, so tools/generate_figures.py was not run as a script;
    only its STRATA classification was extracted and the byte census re-performed directly."
  - "The README figure 6 caption prints rounded values (3.8 MB, 5 KB). Ratios computed from
    those rounded values give 760:1 and 1,580:1; the exact recomputed values give 741:1 and
    1,615:1. This document uses the recomputed values."
claim_id: ZP-UNF-0003
statement: "A second person existed who shared the subject's birth year and town, made music
          without releasing it, and left no archive."
claim_level: interpretation
source_type: fiction
```

```
independence: contaminated
verification_state: untested
correction_state: fictional
confidence: none
alternative_explanations:
  - "No such person. The reconstruction is a rhetorical device generated by reading the
    vault's own acquisition-policy list as a negative mould."
  - "The 'twin' is the subject under a different description, i.e. the same person on a day
    when no artifact was produced."
claim_id: ZP-UNF-0004
statement: "Every ZP- and ZKT- identifier in the repository begins at 0001 or later; no
  identifier ending -0000 exists anywhere in the tree."
claim_level: observation
source_type: software_behavior
extraction_method: "grep -oE over all .md files, deduplicated"
independence: primary
verification_state: reproduced
correction_state: active
limitations:
  - "Binary artifacts (PDF, DOCX, XLSX, ZIP) were not searched for embedded identifiers."
```

Note the shape of ZP-UNF-0003. Its independence is contaminated because the framing was supplied by the very archive it accuses; its correction state is fictional; its confidence is none. The accusation in Part V does not depend on it. Every figure the indictment rests on is in ZP-UNF-0001, ZP-UNF-0002, or Appendix C.

APPENDIX C · VERIFICATION METHOD

Everything marked recomputed in this document was produced by the checks below, run against the committed files on this branch at build time. Re-run them with the commands given; they are ordinary and take seconds.

CLAIM	CHECK	RESULT OBTAINED
182 catalogued rows	Row count of Zazie_Productions_Discography.csv minus header	182
21 releases / 21 release dates	Distinct Release Title and Release Date	21 / 21
164 distinct titles	Distinct Track Title strings	164
143 ISRCs, 21 N/A	Distinct non-N/A ISRC strings; literal N/A count	143 / 21
7 h 29 m 27 s runtime	Sum of Duration parsed as mm:ss	26,967 s
Per-year row counts	Group rows by release year	2019:5 2020:8 2021:5 2022:23 2023:43 2024:60 2025:4 2026:34
Median duration collapse	Median Duration by year	2023 = 3:32; 2024 = 1:22; 39 of 60 rows in 2024 under 2:00
Longest / shortest	Sort rows by parsed duration	8:55 Spectral Ode to Synesthesia / 0:07 Hues Adorned in White (Interlude)
Spring and December clusters	Release events by calendar month	Mar-May 10 of 21; December 3
Deluxe inflation ×6.4 / ×2.8 / ×2.2	Row counts, original vs super deluxe	5→32, 8→22, 13→28
13 rows registered after release	ISRC characters 6–7 read as 20YY, compared with release year	13 of 161 coded rows
Release-type and artist splits	Value counts	Album 146 / EP 27 / Single 9. Zazie Productions 178, Unwashed Miscreant 3, Unwashed Miscreant & Hazzard Rune 1
102 files, 9.74 MB, 165,218 words	Census of the repository root; word count over text-bearing files	102 files / 10,213,021 bytes / 165,218 words
No -0000 identifier	Regular-expression sweep of all Markdown for ZP-/ZKT-identifiers	28 distinct identifiers, all ≥ 0001
b. 2006; Asheville; homeschooled; BMC lineage; age-14 commission	Text extraction of the residency dossier and artist CV	Present verbatim in both
Strata masses; 741:1 and 1,615:1	AST-extract the STRATA dict from tools/generate_figures.py; byte-census every named file	Identity 3,763.2 KB / stewardship 5.1 KB across 2 files; 0 files missing; ratios 741:1 and 1,615:1

Independent cross-check: the first fifteen rows of this table reproduce, without exception, the figures the vault prints for itself in DEEP_GAP_AUDIT.md §2.3 and README §07a. The sixteenth row was recomputed rather than taken on the archive's word, and the recomputation disagrees with the archive's own rounding: the README figure 6 caption prints 3.8 MB and 5 KB, from which one derives 760:1 and 1,580:1; the exact byte census gives 3,763.2 KB

and 5.1 KB, i.e. 741:1 and 1,615:1. This document uses the recomputed values throughout and records the discrepancy in the ledger as ZP-UNF-0002. It also recovers two strata the README caption omits entirely — specimens at 144.9 KB and index at 128.7 KB — neither of which changes the finding.

APPENDIX D · REDACTIONS AND WITHHELD MATERIAL

WHAT IS NOT IN THIS DOCUMENT, AND WHY

- Personal identifying information.** The residency dossier in this repository prints, in plain text on its final page, a street address, a telephone number, and a personal e-mail address. None is reproduced here. The vault's own Deep Gap Audit §10 reaches the same conclusion independently, warning that this repository aggregates legal identity, city, company, catalogue, psychological self-description, and business context in one place, and that the combination lowers the work required to mount a targeted approach.
- The name he is called at home.** Withheld for the same reason, and because term 6 of the relief sought is that he not be recovered.
- A recommendation, stated once.** Term 5 of §26 asks the archivist to remove those three lines from the residency dossier at the repository root. That request is made in the twin's voice because it is his principle, but it is the biographer's recommendation and it does not depend on any reconstruction in this document. It follows from the vault's own threat model.
- Sensitivity classification.** Per EVIDENCE_GOVERNANCE_HANDBOOK.md §2.6: this document is internal as to the catalogue analysis and sensitive as to anything touching the identifiable subject. It is not a public artifact and should not become one.

APPENDIX E · WHAT WOULD FALSIFY THIS BIOGRAPHY

A reconstruction that cannot be wrong is not a reconstruction; it is a mood. These are the observations that would defeat it.

- **Against the whole conceit.** Evidence that the subject in fact does not archive, and that the repository is a commission, a joke, a coursework artifact, or a performance by someone else. The vault's Deep Gap Audit raises authorship provenance as an open question and does not resolve it.
- **Against Counts I and V.** A distributor or platform workflow change explaining the 2022 registration sweep and the deluxe editions. The Deep Gap Audit lists exactly these alternatives for the registration finding and they have not been excluded here.
- **Against Count II.** A different stratum classification. The 5.1 KB and 3,763.2 KB figures were recomputed here, but they are recomputed using the vault's own assignment of files to strata, taken from tools/generate_figures.py. That assignment is a hand-maintained list and it is arguable: the residency dossier sits in mythography rather than evidence, and the two stewardship files are both instructional rather than receipted. Reassign files and the ratio moves. It would take a very aggressive reassignment to close a 741:1 gap, but the classification is not beyond dispute.
- **Against Count IV.** Any fully represented other person anywhere in the vault's binary artifacts. Only the Markdown, CSV, and four PDFs were read for this document; the 222-page compendium, the DOCX files, and the XLSX workbook were not parsed in full, and any of them could contain one.
- **Against the twin.** Anything at all. He is a reconstruction from an acquisition policy. If the subject produced no artifacts on a given Tuesday and lived an ordinary day, the twin and the subject are the same person and this document is a distinction without a difference. The biographer considers that the most likely falsifier and has said so in the ledger as ZP-UNF-0003, alternative explanation two.

APPENDIX F · SOURCES

FILE	USED FOR
DEEP_GAP_AUDIT.md	§11.1 (the eight exclusions, the spine of Part II); §11.2 (acquisition policy); §2.3 (catalogue profile); §3.3 (no fully represented other people); §9.2 (authorship footer); §10 (privacy and threat model)
EVIDENCE_GOVERNANCE_HANDBOOK.md	§1 (chain of custody of meaning); §2 (controlled vocabulary); §2.6 (sensitivity classes); §3 (claim record format)
README.md	§00a (colour code, the eight strata); §01 (“What do I do on Tuesday?”); §02 (the governing statement); §07a (Pattern Atlas, figure 6 strata masses, the provenance timeline, “after every silence, a notarization”); §08 (the twelve questions); §09 (working session, receipt console); §14 (the one-line version)
Zazie_Productions_Discography.csv	Every catalogue figure in Tables 1, 4, 5 and Appendix C
Zazie_Kanwar-Torge_Artist_CV_2026_electroacoustic.pdf	Age-14 commission; Ars Electronica 2026; exhibitions, radio, compilations, filmography, albums

FILE	USED FOR
ZazieKanwarTorge_ArtZoydResidency_SignalRotAtlas_2026.pdf	b. 2006; Asheville 28806; homeschooling and the BMC lineage; the RIM; “Cheaper Impressions” provenance; the PII named in Appendix D
Lost_Zazie_Productions_Archive.pdf	Table 2, the mythologised nine
Zazie_Productions_Instagram_Forensic_Audit.pdf	Finding F-09, total anonymity; the 14/29/8/8 evidence base; the 2026-08-19 retrieval date
Identity _ Typological Vault.pdf	The typological inventory cited in Count VII and §4
Mythographic Childhood.md	§22, “My mother's name wasn't her name”
Entry Instructions for the Undetonated Artist.md	Count VIII; the tagged escape rite
RECURSIVE IDENTITY CASTLES.md	The 2042 AI-archivist hypersigil, Counts VI and §18
CLAIM_PROVENANCE_LEDGER.md; tools/generate_figures.py; tools/check_stewardship_receipt.js	Context for the ledger format, the strata census, and the receipt console described in Table 1

Sixteen files read; four PDFs parsed by text extraction. The 222-page compendium, the three DOCX files, the XLSX workbook, and the ZIP archive were not parsed for this document, and Appendix E records that as a limitation on Count IV.

THE UNCREATED TWIN · ZP-UNFILED-0000 · a Zaziopath reconstruction in the ninth stratum, which owns no colour, no glyph, and no hex · compiled 2026-09-27 · every catalogue figure recomputed from the committed files · every statement about the twin labelled reconstructed · nothing finished.
