What does the "Estimated Ideology" mean?

In addition to matching you to the six moral foundations, the quiz also attempts to match you to a political ideology. This is much less accurate than the values and axes since it is just an estimation based on correlations between people's moral and political beliefs, so don't take it too seriously. This is called an estimate because the connection between the moral values and the political ideologies are correlated, but not directly linked.

Note: The names of these values (i.e. Care, Fairness, Loyalty, Authority, Sanctity, and Liberty) refer to moral foundations, not political positions. Therefore, it is perfectly normal for a person to have a high score in seemingly conflicting values, like the values "Authority" and "Liberty".
